How STFC communicates the impact of its large-scale facilities

Friday, 19 June 2015 11:20 (10 minutes)

As the operator of several large scale facilities, including neutrons, lasers, synchrotrons, and high performance computing facilities, the Science and Technology Facilities Council has carried out several impact evaluations of these facilities in recent years. But how do we decide how and what to communicate? Claire will present the range of studies that have been carried out on STFC facilities and their associated supporting technologies, and the pros and cons of these approaches.
