The cold neutron imaging beam line ANTARES

Wednesday, 9 December 2020 17:40 (20 minutes)

The cold neutron imaging beam line ANTARES at FRM II is a state of the art facility which combines excellent beam properties with highly flexible experimental conditions. User experiments can be performed with complex sample environment like cryostats, furnaces or tensile rigs.

In this poster we give an overview of the beam line layout and possible options of the beam line. Moreover, we will show examples of selected experiments performed at ANTARES to demonstrate the potential of the beam line.
