## How Polymorphism and Ligand Binding modulate G-quadruplex Fast Dynamics

*Monday, 20 March 2023 16:00 (2 hours)*

G-quadruplexes (G4s) formed by the human telomeric sequence AG<sub>3</sub>(TTAG<sub>3</sub>)<sub>3</sub> (Tel22) play a key role in cancer and ageing. G4 structures are known to display a variety of topologies, which are determined by several factors, resulting in structural polymorphism. Neutron Scattering techniques are a valuable tool to investigate how G4 structural polymorphism and ligand binding affect their sub-nanosecond dynamics. Within this context, we combined FTIR spectroscopy to monitor the Tel22 conformation and EINS to assess the corresponding dynamical properties. K<sup>+</sup> and Na<sup>+</sup> stabilized G4s were found to be in the parallel and mixed parallel-antiparallel topologies, respectively, with the latter resulting to be dynamically more stable. This result is compatible with the presence of ordered hydration-water structures in the antiparallel conformation. Complexation with the model ligand BRACO19 (BR19) resulted in an overall increase of Tel22 mobility. Such a dynamical enhancement, which is uncorrelated to the G4 topology, can be ascribed to a preferential binding of water molecules to Tel22 rather than to BR19.

**Primary authors:** Prof. PACIARONI, Alessandro; BERTINI, Luca (Università degli Studi di Perugia)

**Co-authors:** Prof. ORECCHINI, Andrea (Università degli Studi di Perugia); Prof. PETRILLO, Caterina (Università degli Studi di Perugia); NATALI, Francesca (CNR-IOM); Dr RIPANTI, Francesca (Università degli Studi di Perugia); Dr COMEZ, Lucia (Istituto Officina dei Materiali (IOM-CNR)); Prof. PAOLANTONI, Marco (Università degli Studi di Perugia); Dr LIBERA, Valeria (Università degli Studi di Perugia)

**Presenter:** BERTINI, Luca (Università degli Studi di Perugia)

**Session Classification:** Poster Session MONDAY

**Track Classification:** Health and Life Sciences
