Novel Sr-carbonates synthesized at moderate pressures and temperatures

Wednesday, 16 March 2022 09:40 (20 minutes)

We synthesized novel Sr-carbonates at moderate pressures and temperatures in a laser heated diamond anvil cell. We obtained the sp³-carbonates Sr₂[CO₄] and Sr₃[CO₄]O with isolated CO₄ tetrahedra and both phases can be recovered at ambient condition. We also synthesized Sr[C₂O₅] by a reaction of Sr[CO₃] with CO₂ which is the first inorganic pyrocarbonate salt.
