Facilities for Macromolecular Crystallography at the HZB

Wednesday, 16 March 2022 15:50 (20 minutes)

The MX group at the Helmholtz-Zentrum Berlin (HZB) is operating 3 state-of-the-art synchrotron beam lines for MX at the BESSY II facility. Currently, the three beam lines represent the most productive MX-stations in Germany, with more than 3800 PDB depositions. BLs14.1-2 are tunable, while beam line 14.3 is a fixed-energy side station. Within this presentation a summary on the experimental possibilities of the beam lines and the ancillary equipment provided to the user community will be given.

Primary authors: FEILER, Christian (Helmholtz-Zentrum Berlin); LENNARTZ, Frank (Helmholtz-Zentrum Berlin); MUELLER, Uwe; GLESS, Christine (Helmholtz-Zentrum Berlin für Materialien und Energie); WEBER, Gert (Helmholtz-Zentrum Berlin für Materialien und Energie); WOLLENHAUPT, Jan (Helmholtz-Zentrum Berlin); WEISS, Manfred (Helmholtz-Zentrum Berlin); HELLMIG, Michael (Helmholtz-Zentrum Berlin für Materialien und Energie); STEFFIEN, Michael (Helmholtz-Zentrum Berlin für Materialien und Energie); FRÖLING, Paula (Helmholtz-Zentrum Berlin für Materialien und Energie); FÖRSTER, Ronald (Helmholtz-Zentrum Berlin für Materialien und Energie); BARTHEL, Tatjana (Helmholtz Zentrum Berlin für Materialien und Energie); HAUSS, Thomas (Helmholtz-Zentrum Berlin)

Presenter: WEISS, Manfred (Helmholtz-Zentrum Berlin)

Session Classification: Instrumentation in Biocrystallography

Track Classification: Main conference: Biologic Structure, Function, Reactivity, and Regulation
