Squeezing the Most Data out of Your High-Pressure Experiment

Tuesday, 15 March 2022 16:24 (1 minute)

Within the last decade high-pressure studies have received an increase of interest. A major challenge in the field of high-pressure crystallography is the acquisition of data of sufficient quality and completeness for a successful structure determination. This presentation will be reviewing recent advances in hardware development and highlight the latest improvements in software, which help in tackling the problems with data acquisitions in high-pressure experiments using a Bruker D8 VENTURE.
