Crystal structures of host-guest complexes of carboxylated pillar[5]arene with drugs

Tuesday, 15 March 2022 16:29 (20 minutes)

Crystal structure of the complexes of carboxylated pillar[5]arene, a water-soluble macrocyclic host, with guanidine and amidine drugs (eg. alexidine and pentamidine) provide important information on the host-guest interactions and self-assembly in the solid state. Such complexes can potentially be used in the design of drug delivery systems.

Primary author: BUTKIEWICZ, Helena (Institute of Physical Chemistry Polish Academy of Sciences)

Co-authors: Dr DANYLYUK, Oksana (Institute of Physical Chemistry Polish Academy of Sciences); Dr SASHUK, Volodymyr (Institute of Physical Chemistry Polish Academy of Sciences); KOSIOREK, Sandra (Institute of Physical Chemistry Polish Academy of Sciences)

Presenter: BUTKIEWICZ, Helena (Institute of Physical Chemistry Polish Academy of Sciences)

Session Classification: Postersession

Track Classification: Young crystallographers Lightning Talks
