Electron density studies on a Cobalt Single-Molecule Magnet

Wednesday, 16 March 2022 18:44 (1 minute)

Electron density studies on a recently published Cobalt Single-Molecule Magnet (SMM) were conducted to get a better insight in the origin of magnetical properties of this compound. The Electron density was obtained by X-ray diffraction and modelled with multipolar refinement.

Primary authors: Prof. STALKE, Dietmar (University of Göttingen); Mrs RACHUY, Katharina (University of Göttingen); Mrs HERBST-IRMER, Regine (University of Göttingen)

Presenter: Mrs RACHUY, Katharina (University of Göttingen)

Session Classification: Postersession

Track Classification: Main conference: Structural Chemistry & New crystal structures
