## Spectroscopic and structural characterization of molecular organic frameworks for heterogeneous catalysis

*Tuesday, 15 March 2022 18:14 (1 minute)*

This research aims at the local structure characterization of carbon-nitrogen polymers which function as support materials for single-atom catalysts as well as the as-synthesized catalysts. Here, the focus lies on graphitic carbon nitride on which 1wt.% Pd was immobilized. Different structural and spectroscopic methods like pair distribution function analysis and X-ray photoelectron spectroscopy were applied in order to draw structure-performance relationships.

**Primary author:** Mrs KAPPEL, Isabella

**Co-authors:** VENNEWALD, Maurice (RWTH Aachen); Mrs SACKERS, Nina (RWTH Aachen); Mr IEMHOFF, Andree; Prof. PALKOVITS, Regina (RWTH Aachen); Dr WEIDENTHALER, Claudia (Max-Planck-Institut für Kohlenforschung)

**Presenter:** Mrs KAPPEL, Isabella

**Session Classification:** Postersession

**Track Classification:** Main conference: Structural Chemistry & New crystal structures
