Instrumentation and instrument design for neutron imaging

Wednesday 30 August 2017 08:30 (1 hour)

Burkhard Schillinger, Heinz Maier-Leibnitz Zentrum (MLZ), Technical University of Munich

burkhard.schillinger@frm2.tum.de

This talk will illustrate the setup of a neutron imaging facility at either a tangential or radial beam line with direct view to a reactor, or a facility to a neutron guide. It will explain about collimation and approximated parallel beam geometry, discuss the placement and design of collimators, necessary shielding against gammas and neutrons, and possible shielding materials.
