## THE LOW FLUX NEUTRON SOURCE AKR-2

*Monday, 17 September 2018 17:45 (15 minutes)*

The training and research reactor AKR-2 is a thermal, homogeneous, solid material moderated zero power reactor with maximum permanent power of 2 Watt. AKR-2 was completely refurbished in 2005 and is actually the most advanced zero power training reactor in Germany. The facility is equipped with a state-of-the-art digital I&C control system Teleperm XS (see also <http://tu-dresden.de/mw/akr>). The main purpose of AKR-2 and its design basis was and is the education of students in nuclear and reactor physics, in nuclear engineering as well as to teach fundamental knowledge in radiation protection. Due to the physical characteristics of AKR-2, research is limited to projects where low neutron fluxes are desirable and variable operational conditions as well as low costs are requested. The access to AKR-2 is uncomplicated and there is no proposal reviewing system. While at high flux facilities high level and well recognized research is carried out, AKR-2 is ideal for idea, test and quick trial experiments. There are a couple of experimental channels enabling flexible access to the neutron field. In the presentation, we will give a detailed description of the AKR-2's design and its physical properties. Some selected results of neutron imaging with thermal neutrons which was performed for the first time at AKR-2 will be shown. Furthermore, we would like to discuss the question how the AKR-2 can contribute in the education of scientists dealing with neutron scattering methods in future?

**Primary author:** Dr LANGE, Carsten (TU Dresden - Training Reaktor AKR-2)

**Co-author:** Mr BERNT, Nico (TU Dresden - Training Reactor AKR-2)

**Presenter:** Mr BERNT, Nico (TU Dresden - Training Reactor AKR-2)

**Session Classification:** Poster session 1

**Track Classification:** P10 Others
